Massage Chair Deluxe

DESIGNED FOR  DANISH STANDARDS

Massage Chair Deluxe

A massage chair is an investment in your well-being. It improves blood circulation, helping deliver nutrients and oxygen to muscles and organs while removing waste products. Massage can also lower blood pressure and promote a deeper sense of calm.

In a busy everyday life with limited “me-time,” a massage chair provides convenient, on-demand relief. With customizable settings and programs for relaxation, pain relief, or stimulation, it offers both comfort and health benefits.

Massage releases endorphins that enhance happiness and well-being, potentially reducing anxiety and depression. It may also strengthen the immune system, improve sleep quality, and boost productivity.

Massage Chair Deluxe features 18 automatic programs tailored to individual needs. A standout function is its neck massage and stretching capability—highly valued by those who experience neck and shoulder discomfort after long hours in front of a screen.

Specifications

Dimensions and Weight	Size, upright: 156 x 75 x 111 cm (L x W x H) Size, reclined: 177 x 75 x 81 cm (L x W x H) Weight: 75 kg

In addition to the neck and shoulder function, the 18 programs also include specific settings designed to relieve tension and promote relaxation throughout the entire body, from the lower back down to the feet. This ensures a full-body experience that not only focuses on symptom relief, but also on overall well-being and stress reduction. The chair is also equipped with advanced technology that allows the user to enjoy a personalized massage experience. With adjustable settings for intensity, speed, and heat, each session can be tailored to individual preferences. This makes the Massage Chair Deluxe an ideal solution for those seeking a targeted and effective way to combat daily fatigue and stiffness

Super Long SL-Track

The Super Long SL-track is an extended rail structure along which the massage chair's rollers move. It combines the "S-track," which follows the natural curve of the spine, with the "L-track," which extends beneath the seat to reach the thighs. This extended track ensures a comprehensive massage from the neck down to the thighs, delivering a deep massage experience across almost the entire body.

Thai Stretch

Thai Stretch is a massage program that uses rollers and airbags to apply stretching and compression techniques to the body, simulating an authentic Thai massage. It helps increase mobility, relieve tension, and improve blood circulation.

Smart Body Scanning

Massage Chair Deluxe uses various sensors to analyze and understand the user's body contours, size, and specific pressure points. The technology automatically adjusts the chair to ensure the massage is optimally targeted to the user's needs — from positioning the rollers to regulating pressure intensity.

This customization guarantees a personalized massage experience that is both more comfortable and more effective by focusing on the areas that require the most attention. The collaboration between advanced sensors and software ensures a massage tailored to each individual user's body profile.

Custom FIT

Individual Workplace Adjustment

Your employees are different and work differently. With a Custom FIT, we review each employee's workplace with the aim of ensuring optimal working conditions for the individual.

A Custom FIT includes an ergonomic review of the employee's body position in the working situation, with special focus on the back and neck, where many experience problems. At the same time, we make measurements and observations in relation to air, light, and sound.

During the review, we primarily solve the challenges that can be handled with a better arrangement of the existing work tools. This may involve adjusting the chair, desk height, or rear-

ranging items on the desk. In addition, we guide the employee on what they themselves can be aware of in relation to maintaining a good work posture.

After reviewing all employees' work situations, we compile a set of recommendations for the management with initiatives that will optimize the working conditions for each individual.

BONUS:

With all Custom FIT reviews, we provide a package with tools for light exercises throughout the work day.

Ergonomic Review

A review takes approximately 15-20 min. per employee. If something can be corrected on the spot, we do it together with the employee.
